

Different domains from which commits for Ansible have been made

Different domains from which commits for CFEngine have been made

Deduction: From the above statistics, we could see that the maximum commits for Ansible have through the gmail domain which shows that Ansible is popular among general users.

On the other hand, the maximum commits for CFEngine have been made through people from the cfengine community. The major reason behind this is the lack of marketing as well as the late commercialization of cfengine.
